

CS 106A Section 4 Handout (Week 5)

GraphicsProgram, Animation, Events, Fields

The programs below may or may not require use of **fields** (private instance variables). Use a field only when necessary!

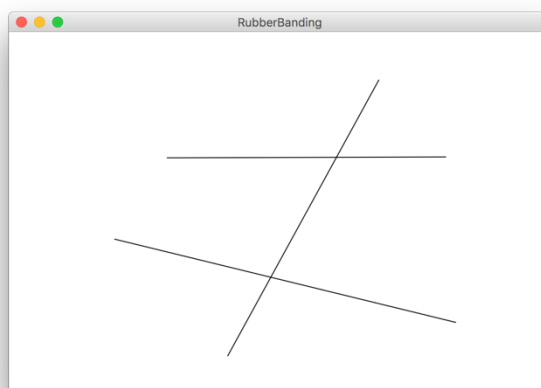

1. Random Circles

Write a **GraphicsProgram** that draws a set of ten circles with different sizes, positions, and colors. Each circle should have a randomly chosen color, a randomly chosen radius between 5 and 50 pixels, and a randomly chosen position on the canvas. The entire circle must fit inside the canvas without extending past the edge. On some runs of this program you might not see ten circles. Why?

For extra practice, try modifying your program to draw a new circle (with a random size and color) each time the user clicks the mouse. Each circle should be centered at the point where the user clicked.

2. Drawing Lines

Write a **GraphicsProgram** that allows the user to draw lines on the canvas. Pressing the mouse button sets the starting point for the line. Dragging the mouse moves the other endpoint around as the drag proceeds. Releasing the mouse fixes the line in its current position and gets ready to start a new line.

For example, suppose that you press the mouse button at the bottom-center of the screen and then drag it upward to the right. Then, you would get the vertical line that is included in the picture above. (The other two horizontal lines would be added with additional click-and-drags). Because the original point and the mouse position appear to be joined by some elastic string, this technique is called rubber-banding.

CS 106A Section 4 Handout (Week 5)

3. Sunset

Write a `GraphicsProgram` that simulates a sunset. Your program should start off by drawing the sun centered in the window over a green horizon, as shown above. Your program should then animate the sun sinking beneath the horizon. If you'd like, you could change the color of the sun, the sky, or the horizon as the sun sets.

4. Robot Face

Write a `GraphicsProgram` that draws a centered robot-looking face as in the screenshot above. This face consists of four parts – a head, two eyes, and a mouth – which are arranged as follows:

- *The head.* The head is a gray rectangle with dimensions given by the constants **HEAD_WIDTH** and **HEAD_HEIGHT**.
- *The eyes.* The eyes are circles whose radii in pixels are given by the constant **EYE_RADIUS**. The centers of the eyes should be set horizontally a quarter of the width of the head in from either edge, and one quarter of the distance down from the top of the head. The eyes are yellow.
- *The mouth.* The mouth should be horizontally centered with respect to the head and one quarter of the distance up from the bottom of the head. The dimensions of the mouth are given by the constants **MOUTH_WIDTH** and **MOUTH_HEIGHT**. The mouth is white.
